Name	Springs Decoration		
Description	This effect involves focusing a bright light on a specific subject, area, or object to draw attention and create a dramatic effect. Spotlighting is commonly used in stage performances, art exhibitions, and architectural highlighting.Uplighting involves placing lights at the base of walls or structures to illuminate them from below, creating a sense of depth, texture, and highlighting architectural features. This effect is frequently used for accentuating columns, trees, and building facades.
